

ABSTRACT OF THE DISCLOSURE

A weight detecting device for microwave ovens is used to detect a weight of food placed on an exterior casing to minimize a space to install a weight sensor and to prevent heat from being transmitted from an interior casing through a top plate of the interior casing to the weight sensor. The weight detecting device includes a weight detecting unit and a support unit. The weight detecting unit is supported at an end thereof, and detects a weight according to a force applied to a free end thereof. The support unit supports the weight detecting unit at a position spaced apart from a top plate of an interior casing of a microwave oven.
